

Widespread disease

Dementia

“With his progressing dementia, my husband simply couldn’t rest anymore at night. I was very concerned, because I got far too little sleep, as well, and was at the end of my rope.”

70% of people with dementia suffer from sleeplessness.

Sleep problems of people with dementia mean enormous stress for caregiving relatives at home. The burden for caregivers increases as the individual with dementia sleeps more irregularly. So, caregivers must be on stand-by day and night.

The Thevo –

mobility bed

ThevoVital for dementia.

- ✓ Supports improved sleep for people with dementia
- ✓ Without side effects
- ✓ Relieves relatives and caregivers at night
- ✓ Fits every bed type
- ✓ World first; EU patent No. 1898750

Combat sleep problems: ThevoVital

The mobility bed reacts to the slightest movement of the person, even breathing. MiS Micro-Stimulation® returns tiny counter movements helping the patient maintain orientation. They feel safe and are able to relax. The mobility bed offers persons with dementia the basis for good sleep.

“The mobility bed helps my husband sense his body, even during sleep. He remains oriented – the prerequisite for healthy sleep.”

ThevoVital – mobility bed

ThevoVital relieves relatives and caregivers.

It provides the basis for good sleep.

Many people with dementia wake up in the morning more refreshed. They exhibit better balance and are more active during the daytime.
